

Using the VPN client at the ASC

- **If you do not have a VPN client yet:**

Choose the wireless network “lrz” and go to

<http://www.lrz-muenchen.de/services/netz/mobil/vpn/>

You can reach that webpage even without general internet access. Then choose *Download Cisco IPsec VPN Clientsoftware* at the bottom right. When clicking on the link you are led to a page, where you still have to log in in order to download the VPN client. Insert

account@physik.lmu.de

at the field “Kennung” (where you replace “account” with the username you got from us) and insert your password at “Passwort”. After log in you can choose the VPN client you would like to download. Note that for Windows 7, Vista, XP the new client “AnyConnect” is recommended. However, older versions of the “Cisco” client should also work. It might be that you will have to download the LRZ-profile in addition and import it into your VPN-client. You can find the profile at the bottom of the page where you downloaded the VPN client. In order to log in with the VPN-client, use the same username and password as before (i.e. use “account@physik.lmu.de” as log in name). If you use AnyConnect for the first time, you are asked to specify where to connect to. Insert

asa-cluster.lrz.de

- **If you already have a VPN client:**

- If you have “**AnyConnect**” then you should install an older version as well. You can do so in the way described above. The reason is that you will need the LRZ-profile in order to log into the LRZ net (“LRZ” is the Munich computer center). However, “AnyConnect” does not allow to import profiles easily. There should be no problem with having two VPN clients installed.
- If you have an **older version** of a VPN client which allows you to import profiles, then you should go to

<http://www.lrz-muenchen.de/services/netz/mobil/vpn/>

and then choose *Download Cisco IPsec VPN Clientsoftware* at the bottom right (choosing “lrz” as the wireless network will allow you to visit that webpage even without general internet access). When clicking on the link you are led to a page, where you still have to log in in order to download the VPN client. Insert

account@physik.lmu.de

at the field “Kennung” (where you replace “account” with the username you got from us) and insert your password at “Passwort”. After log in you should go to the bottom of the page and download the LRZ profile by clicking on “LRZ Profil”. After downloading it to your laptop, you open your VPN client and import the LRZ profile. Afterwards, you should be able to log in using the same username and password as before (i.e. use “account@physik.lmu.de” as log in name).

- **If you still need help:**

There is some help for installation at the bottom of the webpage

<http://www.lrz-muenchen.de/services/netz/mobil/vpn/>

but it is in German. If you do not get along with that, call the hotline: (089) 35831-8800. They are very efficient and helpful.
