

**Seminar on**  
**THEORETICAL PARTICLE PHYSICS**

on Wednesday, 6 May 2015, at 2.00 p.m. c.t.  
Theresienstraße 37 / III, Seminar Room A318

Speaker: Fernando Febres Cordero  
Physikalisches Institut der Fakultät für Mathematik  
und Physik, Universität Freiburg

Title: "Processes with many Jets at the LHC"

**Abstract**

We study the impact of NLO QCD corrections to processes with many jets at the LHC. We study universal behavior that appears for large enough multiplicity and use it for extrapolating predictions. We show predictions for the 13TeV LHC. We show the BlackHat+Sherpa Ntuple format that allows theorist and experimentalist to access complex fully differential NLO QCD results.
